Interactive and static maps are proliferating on web sites of local and State agencies in Utah. Concurrently, the number of GIS data set download requests made to Utah's State Geographic Information Database (SGID) continues to grow. With these developments in mind, the Utah Automated Geographic Reference Center (AGRC).

- AGRC provides several internet-based mapping services.
- ArcGIS Server Application Design and Hosting
- ArcGIS Server-based web services for embedding the display, query, and analysis of maps and geographic data in applications
- ArcIMS Application Design and Hosting
- maps.utah.gov catalog of online maps pertaining to the Utah
