

Image Server Layers Renamed

Last Updated 20, Feb. 2008

In order to make the SGID Image Server imagery layers more friendly, all existing services have been renamed and grouped into category folders.

The old layer names (e.g. 100KDRG, 2006NAIP) will remain usable until March 1, 2008. After March 1st, the old layers will be deleted and any image service layers using the old layer names will no longer work. This means you'll want to delete the old image server layers from your ArcMap projects and add new ones from the newly created folders and layer names.

We realize that this will be an inconvenience, however AGRC has received a volume of feedback on the Imager Server layer names usability. Hopefully, by making this one-time change, we will make using Image Server more intuitive.
