Updated 4/29/08

The Utah Transit Authority bus routes, TRAX light rail extension to the transit hub, and Front Runner commuter rail feature classes have again been updated in the SGID database server and on the SGID file-based products on the ftp site.

This data includes the latest modifications made this week by UTA to accommodate the opening of the Front Runner commuter rail. Also, the previous load of this data had a datum shift issue introduced by AGRC during the loading process. AGRC has corrected this and all data should now be positioned correctly.
