Announcement from Orem City, Utah!

Our 6-inch, color resolution aerial photography, shot in November 2007 by Olympus Aerial, is now available to all as an ArcIMS service to ArcGIS Desktop users.

To connect to it, and other Orem City GIS services, open ArcCatalog and add gis.orem.org as an ArcIMS Service under the GIS Servers node.

Our fly-over contains more tiles than we've ever shot before, including all of Vineyard, more of Lindon, more of Provo, and more of Provo Canyon. Now you can make maps of Orem data without having a CD of shapefiles or lossy MrSID images. Go ahead! Try it and take a look around!
