The Utah State Archives and the AGRC are in the midst of a special project to identify GIS datasets for preservation and archival purposes. This project called the Multi-State Geospatial Content Transfer and Archival Demonstration is a partnership of the National Digital Information Infrastructure and Preservation Program (NDIIP).

AGRC encourages Utah GIS organizations to participate in this project by registering your GIS datasets with the national inventory website: <http://www.gisinventory.net/>. This is the site formerly known as Ramona).

This project is sponsored by the U. S. Library of Congress with North Carolina, Kentucky and Utah as participating partners. For further information on the project, please go to:
