

ArcSDE 9.1 Server Receives 1 Month Mothball Reprieve

Contributed by AGRC Administrator
28, Feb. 2007

The old SGID ArcSDE 9.1 database server (URL: oldgdb92.agrc.utah.gov) will remain in service until March 31st, 2007. This server was originally slated for the scrap heap at the end of February but its terminus date has been extended in an attempt to accommodate data users that have yet to install the ArcGIS 9.2 clients. If your agency has not made the switch to 9.2 yet, please consider doing so soon as the financial cost of extending the lifetime of the 9.1 server and its storage space will likely prohibit further extensions.

SGID users already utilizing the new ArcSDE 9.2 database server will not be impacted by this change.
