A new municipal boundaries layer for Utah cities and towns is now available on the SGID ftp site and SDE server. The dataset called SGID.U024.Municipalities, attempts to represent the ground condition at the end of the 2008 calendar year.

This dataset was prepared by AGRC by refereeing between data submitted to the Lieutenant Governor's office for boundary change certification and data provided directly from several participating entities in the following counties:

- Box Elder
- Cache
- Carbon
- Davis
- Duchesne
- Emery
- Iron
- Millard
- Salt Lake
- Tooele
- Uintah
- Utah
- Wasatch
- Washington
- Weber

Thus features in this dataset do not represent the legal boundaries of these entities but rather an interpreted layer that attempts to take the best data available and remove overlaps and other logical inconsistencies to display the boundaries as they are implemented and administered locally.

Download this dataset in Shapefile or File Geodatabase formats
