

SGID Servers, Scheduled Outage, Sunday Sept. 16th

Contributed by AGRC Administrator
11, Sep. 2007

The State of Utah's Division of Enterprise Technology will be updating firmware on its EMC storage clusters this weekend. AGRC uses these devices to provide SDE Database Server and Image Server services. Due to the potential impacts of this change, the SGID Database Server and all other SDE instances as well as Image Server will be unavailable on Sunday September 16th from 0600 to 1200. GIS data will continue to be available through AGRC's home page and from AGRC's FTP server.
