The mission of AGRC is to encourage and facilitate the effective use of geospatial information and technology for Utah.

The Utah Automated Geographic Reference Center (AGRC) provides a wide range of Geographic Information System (GIS) and other geospatial support services. AGRC strives to ensure a high level of coordination among Utah GIS users and effective, efficient use of GIS resources.

Other services include stewardship of the State Geographic Information Database (SGID), facilitation of programs and activities to implement GIS technology across the state, and coordination of GIS policy development and implementation activities.

AGRC also provides consulting services to federal, state, and local government and other organizations, including GIS analysis and application development, GIS training courses, and Internet Map Service development and hosting.
